U.S. Patent Application No.: 10/532,084

Amendment filed November 2, 2007

Reply to OA dated August 2, 2007

AMENDMENTS TO THE CLAIMS

Claim 1 (currently amended):

A conductive resin composition comprising:

a conductive filler (A);

a urethane-modified epoxy (meth)acrylate (B) obtained by reacting an epoxy (meth)acrylate (b-

1) with a polyisocyanate (b-2); the epoxy (meth)acrylate (b-1) being obtained by an addition reaction of

an epoxy resin having an aromatic cyclic structural unit and/or an aliphatic cyclic structural unit and a

(meth)acrylic acid; the epoxy (meth)acrylate (b-1) having a hydroxyl value in the range of /00 to 300; the

molar ratio of moles of hydroxyl group of the epoxy (meth)acrylate (b-1) to moles of isocyanate group

of the polyisocyanate (b-2) being within the range of 1.0/(0.5 to 1.5);

a (meth)acrylate (C) having a number average molecular weight of 500 to 10, 000, which

contains 20 to 80% by weight of an aromatic cyclic structural unit and/or an aliphatic cyclic structural unit

and contains no active hydrogen atom; the (meth)acrylate (C) is a reaction product obtained by reacting a

polyetherpolyol having an aromatic cyclic structural unit and/or an aliphatic cyclic structural unit with a

(meth)acrylic acid, or a reaction product obtained by reacting a polyisocyanate having an aromatic cyclic

structural unit and/or an aliphatic cyclic structural unit with a polyetherpolyol having an aromatic cyclic

structural unit and/or an aliphatic cyclic structural unit under the conditions that an isocyanate group of the

polyisocyanate is in excess of a hydroxyl group of the ppolyol, with a (meth)acrylate having a

hydroxyl group; and

the other ethylenically unsaturated monomer (D) which is copolymerizable with the

urethane-modified epoxy (meth)acrylate (B) and the (meth)acrylate (C).

- 2 -

Reply to OA dated August 2, 2007

Claim 2 (Original): A conductive resin composition according to claim 1, wherein the

epoxy resin contains 30 to 90% by weight of an aromatic cyclic structural unit and/or an aliphatic

cyclic structural unit.

Claim 3 (Original): A conductive resin composition according to claim 1, wherein the

epoxy resin is a novolac type epoxy resin.

Claim 4: Canceled

Claim 5 (Original): A conductive resin composition according to claim 4, wherein the

polyetherpolyol having an aromatic cyclic structural unit and/or an aliphatic cyclic structural unit

is an alkylene oxide adduct of a multinucleate phenolic compound.

Claims 6-7: Canceled

Claim 8 (Original): A conductive resin composition according to claim 1, wherein a

weight ratio of the urethane-modified epoxy (meth)acrylate (B) to the (meth)acrylate (C) is from

95/5 to 50/50.

- 3 -

Claim 9 (Original): A conductive resin composition according to claim 1, wherein the

content of the conductive filler (A) is from 50 to 90% by weight.

Claim 10 (Previously Presented): A conductive resin composition according to claim 1,

wherein the content of the conductive filler (A) is from 50 to 90% by weight, the content of the

urethane-modified epoxy (meth)acrylate (B) is from 6 to 18% by weight, the content of the

(meth) acrylate (C) is from 2 to 8% by weight, the content of the other ethylenically unsaturated

monomer (D) is from 2 to 25% by weight, and the total percentage of (A), (B), (C), and (D) is

100%.

Claim 11 (Original): A conductive resin composition according to claim 1, wherein the

ethylenically unsaturated monomer (D) is an aromatic vinyl monomer.

Claim 12 (Previously Presented): A method for producing a conductive resin

composition, which comprises:

(1) the first step of kneading a conductive filler (A), an epoxy (meth)acrylate (b-1)

obtained by the addition reaction of an epoxy resin having an aromatic cyclic structural unit

and/or an aliphatic cyclic structural unit and a (meth)acrylic acid, a polyisocyanate (b-2), a

(meth)acrylate (C) having a number average molecular weight of 500 to 10,000, which contains

20 to 80% by weight of an aromatic cyclic structural unit and/or an aliphatic cyclic structural unit

and contains no active hydrogen atom, and an ethylenically unsaturated monomer (D); and

-4-

Reply to OA dated August 2, 2007

(2) the second step of reacting the kneaded mixture obtained in the first step with the

(meth)acrylate (b-1) and the polyisocyanate (b-2) at a temperature of room temperature to 80°C,

thereby causing chain elongation;

wherein the epoxy (meth)acrylate (b-1) has a hydroxyl value in the range of 100 to 300;

and, the molar ratio of moles of hydroxyl group of the epoxy(meth)acrylate (b-1) to moles of

isocyanate group of the polyisocyanate (b-2) is within the range of 1.0/(0.5 to 1.5).

Claim 13 (Previously Presented): A separator for a fuel cell obtained by molding the

conductive resin composition according to claim 1.

Claim 14 (Previously Presented): A separator for a fuel cell obtained by molding the

conductive resin composition according to claim 2.

Claim 15 (Previously Presented): A separator for a fuel cell obtained by molding the

conductive resin composition according to claim 3.

Claim 16 (Previously Presented): A separator for a fuel cell obtained by molding the

conductive resin composition according to claim 4.

Claim 17 (Previously Presented): A separator for a fuel cell obtained by molding the

conductive resin composition according to claim 5.

U.S. Patent Application No.: 10/532,084

Amendment filed November 2, 2007 Reply to OA dated August 2, 2007

Claim 18 (Previously Presented): A separator for a fuel cell obtained by molding the conductive resin composition according to claim 6.

Claim 19 (Currently Amended): A separator for a fuel cell obtained by molding the conductive resin composition according to claim 10 elaim 7.

Claim 20 (Previously Presented): A separator for a fuel cell obtained by molding the conductive resin composition according to claim 8.
